

LETTER OF RECOMMENDATION

11 NOVEMBER 2023

I am writing this letter to wholeheartedly recommend Lily Gostovic for any position or endeavor she chooses to pursue. I have had the privilege of working with Lily in a collaborative project as part of the course “Software Engineering and Architecture” in the spring 2023. As Lily's acting project client and examiner in the course, I can provide some insight into her character, contributions to the project, response to feedback, and why she is a valuable asset to any team.

Lily is diligent, responsible, and exhibits a positive attitude in all her interactions. In our weekly meetings, she consistently demonstrated an exceptional work ethic, commitment to the project, and a high degree of creativity in solving the task at hand in collaboration with me as a client. Her outstanding communication skills made her an excellent team player, and she fostered a collaborative atmosphere that contributed to the project's overall success.

In this project, Lily worked with five MSc. Computer Science students to develop a website that displays an overview of Danish asylum seeker data scraped from the Danish Refugee Appeals board website. She was responsible for setting up the frontend project and, importantly, enforced good coding practices. Lily established a code review process, implemented linting, and automated code formatting, which significantly enhanced the project's quality and maintainability.

Furthermore, Lily provided support to her group mates working on frontend tasks. She generously shared her knowledge and expertise and directed her team members to reputable online resources for any topics that they found challenging or unfamiliar. Her willingness to help others, combined with her deep technical understanding, was a driving force behind the successful completion of the project.

Additionally, Lily was responsible for developing a page within our website that allows users to filter asylum seeker cases based on four metrics and generate random cases matching the filters for users to read. She was also responsible for setting up API endpoints in the frontend using fetch HTTP requests to retrieve data from the backend, which was crucial for ensuring the seamless operation of our website. Her ability to conceptualize and execute these features was a testament to her problem-solving skills and creativity.

In summary, Lily Gostovic is a highly driven, diligent, creative and collaborative individual with a strong technical skill set. Her character and attitude make her a pleasure to work with. I wholeheartedly recommend Lily for any opportunity that she may pursue, and I have no doubt that she will excel in her future endeavors. If you have any questions or require further information, please feel free to contact me.

Sincerely,

Kristin Kaltenhäuser, PhD Fellow
